

Based Upon: PCT/EP99/01666

at least one of different wall elements (30, 40) [and/or] and cabinet doors (60)[, which have] having different installation depths extending in a direction vertically [in relation] relative to the respective sides of the rack[, can be] selectively [attached] attachable to the rack.

2. (Amended) In the [The] kit in accordance with claim 1,
wherein

[characterized in that]

at least one of the wall elements (40) has a bulge facing away from [the] a switchgear cabinet interior, which is designed as a cable receptacle and to which cables (54) [can be] are conducted via cable conduits (40.1) of the wall element (40),
and

the cable conduits (40.1) [have been] are cut into the wall element (40)
in [the] an area assigned to at least one of a [the] bottom [and/or the] and a top of the switchgear cabinet.

3. (Amended) In the [The] kit in accordance with claim 3,
wherein

[characterized in that]

1. The first step is to identify the problem. This involves understanding the current situation and the goals that need to be achieved.

Based Upon: PCT/EP99/01666

the angled-off sections (42) [of the various wall elements (42)] have different lengths in [the] a direction vertically [in relation] relative to the [associated side] respective sides of the rack.

6. (Amended) In the [The] kit in accordance with claim 5, wherein

[characterized in that]

the rack has four vertical profiled frame sections (20) forming [constituting] the sides of the rack, and

the wall elements (40) respectively rest with [their] angled-off sections (42) against [the] sides of two adjoining vertical profiled frame sections (20) facing each other.

7. (Amended) In the [The] kit in accordance with [one of claims 1 to] claim 6, wherein

[characterized in that]

each of the cabinet [door] doors (60) has a flat door leaf (61) [which is provided] with a circumferential angled-off section (62) on [its] edges of the cabinet door (60), and

[illegible]

9. In the kit in accordance with claim 1, wherein the wall elements (40) are suspended from a pivot bearing with a horizontal pivot axis, the wall elements (40) are pivoted into an upright mounting position, and in the upright mounting position the wall elements (40) are fixed in place on the rack by at least one fastening element (35).

Based Upon: PCT/EP99/01666

10. In the kit in accordance with claim 1, wherein the wall elements (40) have a flat wall (41) with angled-off sections (42) on vertical edges, and the angled-off sections (42) have different lengths in a direction vertically relative to the respective sides of the rack.

11. In the kit in accordance with claim 10, wherein the rack has four vertical profiled frame sections (20) forming the sides of the rack, and the wall elements (40) respectively rest with angled-off sections (42) against sides of two adjoining vertical profiled frame sections (20) facing each other.

12. In the kit in accordance with claim 1, wherein each of the cabinet doors (60) has a flat door leaf (61) with a circumferential angled-off section (62) on edges of the cabinet door (60), and the angled-off section (62) defines different structural depths.

13. In the kit in accordance with claim 1, wherein an observation window (63) is enclosed in a door leaf (61) the cabinet door (60).
